

Supplemental Table 1. Key simulation parameters used in this study.

Parameters	Input
Number of staff per shift	5, 10, 20, 30
Number of shifts per day	1, 2, 3
Total number of staff (expressed as multiples of staff in the first shift)	2, 4, 6
Frequency of shift change	After 1 day, as well as after 3, 7, 14 consecutive days 5%, 15%, 30%
Secondary attack rates	40% of the number of staff in the same shift
Average number of staff contact per shift in Poisson distribution, c , under base model	20% of the number of staff in the same shift
Average number of staff contact per shift in Poisson distribution, c , under social distancing model	7, 14 and 21
Duration of simulation when outcome is examined (days)	
<i>Protective measures</i>	
Wearing gloves	<i>Odds ratio</i> 0.45
Wearing surgical mask	0.32
Wearing gown	0.23
Wearing N95 mask	0.09

Supplemental Table 2. Proportion of simulated laboratory staff infected by COVID-19 in [base scenario with 15% probability](#) of secondary infection at the end of day 7, day 14 and day 21 of the simulation. In this base scenario, the simulated staff worked fixed alternating workdays (i.e. fixed consecutive days on, and fixed minimum consecutive days off). The results shown are the median of 100 cycles of simulation. NA = not available as the number of staff per shift is too low to simulate under the required conditions.

Supplemental Table 5. Proportion of simulated laboratory staff working in a single shift infected by COVID-19 in a scenario with 15% probability of secondary infection at the end of day 7, day 14 and day 21 of the simulation **without predefined minimum rest day** (i.e. random shift assignment after each shift). The results shown are the median of 100 cycles of simulation.

Supplemental Table 6. Proportion of simulated laboratory staff infected by COVID-19 in base scenario with 15% probability of secondary infection at the end of day 14 of the simulation with the staff observing [workplace social distancing](#) (by reducing the contact rate by half) and using [various personal protective equipment](#). In this scenario, the simulated staff worked fixed alternating workdays (i.e. fixed consecutive days on, and fixed minimum consecutive days off). The results shown are the median of 100 cycles of simulation. NA = not available as the number of staff per shift is too low to simulate under the required conditions.
